

Preface

Eureka, the International Research Institute for a High Quality of Life, was set up in 1997 as a part of the association *l'Albero della Vita* (The Tree of Life) in order to undertake research, carry out experiments and produce and sell the resulting homeodynamic preparations and publications.

The underlying principles of Eureka's activities, which are the same as those that inspired the establishment of the association *l'Albero della Vita* in 1991, can be expressed as a basic commitment to a development that is not only scientific, but also practical and eco-friendly.

The spiritual scientific standpoint from which we look both at Nature and humanity gives us a holistic view that considers material reality as an interweaving of forces and influences deriving from higher beings. It follows that our carefully prepared products are blends of the forces from this way of thinking. Though the users of these products are free to accept or reject our view of the world, it is clear that an appropriate spiritual viewpoint helps to promote the effects the products can have.

All income from commercial activities, minus expenses, is used to sustain and develop the research into homeodynamic preparations and other areas of inquiry. Please keep us informed of the results obtained from the use of the products as well as any observations on results gained by using the products in ways different from those for which they were initially intended.

Anyone who uses homeodynamic products contributes to the healing of the Earth.

Contents

- Preface
- What is a homeodynamic product?
- General indications for the use of the products
- Mechanical equipment
- Starting with the homeodynamic method

Products for Agriculture

- Seed baths
- Preparations for agriculture
- Preparations for compost
- Preparations for the transformation of minerals
- Preparations against pollution for plants and the environment
- General products for protection from parasites and weeds
- Specific products for protection from parasites and weeds
- Preparations for microclimates and the environment
- Preparations for use in the 13 Holy nights
- Substitutes for the zodiacal associations
- Preparations for the health and hygiene of tree.

Eco centre

- Project presentation

Diagnosis using sensitive crystallisation

- Products for the house and building

Furnishing and accessories for the house

- Purifying spirals
- “Aqua Viva”: water vitalizer
- wall rosette to harmonize and disinfect the environment
- wall rosette to help sustain the immune system
- New wall rosettes
- Key rings
- Mobile phone protection
- Domestic electro-magnetic fields protection

- Eureka Skirting boards
- lamp shades
- Incense

Ecologic building

- Preparations for houses and building

Food

- Preparations for digestion

House plants

- Preparations for house plants

L'Albero della Vita

- Our ranges
- Economic aspects
- Information and contacts
- Association and subscription questions

How to restore a bridge to the "diffuse life " through homeopathy

The ancient Greeks were the last Mediterraneans who still lived with the inner forces of the Cosmos and the first to really train the power of thought (philosophy). They had two words to describe life: *Zoe* and *Bios*. By *Zoe* they meant a life that constantly falls from the Cosmos and keeps the Earth and every living being alive. *Bios* was understood as biological existence, namely the life that begins, grows and inevitably ends.

Bios is thus the daughter of *Zoe*, it follows, and *bios* always draws its own sustenance from *Zoe*. *Bios* is perishable. Only *Zoe* is eternal and embraces all of our solar system. It is like a circle that surrounds everything and "a circle of *Zoe*" in Greek is ... Zodiac!

From the above it should be that a farmer's task (and interest) is to try to improve the connection between *Bios* (life of the soil and plant) to *Zoe* (Life perennially flowing and giving). Only thus might we will have healthy and productive plants which are resistant to stress and give nourishment of the highest quality. Unfortunately, increasing pollution (physical, chemical, electromagnetic etc) inhibits this fundamental link. It is with this situation in mind that the research of Eureka has developed and the publishing activity of l'Albero della Vita has grown, studies that prioritize homeopathy as a means to establish a new bridge between *Bios* and *Zoe*.

So what is a homeodynamic product?

We feel it is useful to distinguish two different concepts which are often confused.

The first concept concerns the term "homeopathic". This is composed of: *homeo*, i.e. similar, and *pathy*, i.e. pathology, illness. In contrast to the claims of allopathic medicine, homeopathy regards a substance, which in large doses causes symptoms similar to those found in the diseased organism that needs to be treated, as curative when it is administered to the organism in extremely diluted doses.

As the drug substance is the "healthy" bearer of the same characteristic symptoms (look, colour, smell, etc...) as those forming the pathology which needs to be treated, it has the ability to interact with the sick organism and bring it the specific message to overcome the illness.

The second concept refers to the fact that power is given to this substance through the process of dynamization. This involves diluting the substance several times at a fixed ratio of 1:99, thereby freeing it from the field of weight-bearing forces in which it is normally found. As a result, the substance makes active those “processes” that have defined and formed it. The process sets free the formative life forces which sustain it, thus enabling them to be active therapeutic processes. The higher the level of empowerment, the more the primal forces (connected to the specific substance rather than the actual substance itself) become active. To make them active the diluted substance must be dynamised for a precisely determined period of time at every stage to experience a rhythmic movement with vortexes created periodically in the fluid mass.

This method has several advantages: it leaves no unwanted residues in the soil or plants. It costs very little. It gives extremely practical results, as well as establishing a new “relationship” with life.

An ethical consideration...

In dealing with life forces, man was always aware that he should never be guided by selfish concerns but rather adopt an attitude of devotion and dedication. This – to our minds – is still necessary today to strike the right balance between the Earth, man and the cosmos.

In using homeodynamic products – which by their very nature are even more closely connected to the origin of life (see our booklet “Foundations for a Development of Potentisation”) - it is vital to adopt this inner attitude for the treatment to be a success.

...and a consideration about love

The holistic view to which we subscribe considers the world to be suffused by the forces of universal love. Therefore any collaboration with Life cannot but seek to make the connection with these forces. As this thought takes hold of us a new feeling is born: agriculture becomes the art of loving Life.

The Tree of Life aims to put such an art into practice.

General indications for the use of homeodynamic products

The homeodynamic idea is not a technique, requiring the strict application of a set of rules, but a way of understanding our relationship with nature. She needs our help, which she can ask only of man, because man is the only being who can freely and lovingly act as the channel for the forces of healing. It follows from this that our relationship with nature will work on a different level according to our level of consciousness. As a consequence, homeodynamic products can also be applied in different ways depending on the level of understanding we have acquired of man as the healer of Nature.

There are three main ways of applying homeodynamic products: spraying, irradiation, and using an apparatus called the diffusor.

The first method is based on the ability water has to carry various kinds of message; the homeodynamic product is accordingly diluted in water and sprayed on the fields.

The second method is based on the fact that the glass in the small bottles is a densified microporous liquid which allows the forces and messages of the product in the bottle to ‘breathe’ with the surrounding environment. In this case the irradiation occurs via the humidity present in the air. This method uses bottles placed under trees, “Ambiente” (Environment) products and products to be buried in a field so that they irradiate slowly and continuously for about 2 months over a surface of 1,000 to 2,000 square metres.

The third method requires the use of the device called the Diffusor, which is available to longstanding members only.

Notes on the mechanical apparatus for spreading the products

The farmer must take care to use only pumps which do not re-circulate the liquid (otherwise there would be a “dedynamization” of the product) and which have been thoroughly cleaned of any residues of chemical substances (so as not to carry their message into the field)

To clean the equipment use both water with 5% caustic soda and rinse well (4 times). In cleaning the atomizer the caustic soda is necessary only if the

equipment has been in contact with non-homeodynamic products (synthesised molecules, copper etc...)

How to spray the product

The product is delivered in a concentrate. The farmer must therefore dilute it once in normal water and then spray it following the relevant cosmic impulses, as set out on the label or in the information material available from the association.

From a practical point of view it is advisable to put the product in the vessel and then add the water to mix them in a natural way.

We also recommend that between the spraying of one product and another you leave the pump to dry for 24 hours.

As a general rule we suggest that you allow at least 3 to 4 days to pass between the use of one product and another so as not to send too many messages to the plants and thus “block” their growth. If this should happen, you can intervene to eliminate the effect by using the product Harmonizer (code A01).

Some products, especially synergic ones, can be sprayed together (e.g. Harmonizer + Fruit Plus + Repel insects)

In these cases, as it is not possible to respect the specific day for spraying each one, choose the day that is suitable for the base product and increase the concentration of the others from 10 to 17 ml in 40 litres per hectare.

The total volume of water remains the same however many products are sprayed.

Remember that 1 hectare corresponds to 10,000 square metres of surface area and 1 millilitre (ml) corresponds to 1cc.

Any information given in the following pages may not be complete or exhaustive. Please bear in mind that the use of our preparations is restricted to members who have attended a basic course in homeodynamic agriculture or read the basic homeodynamic books. This catalog is not intended to be replacement for the publications or the directions on the labels of preparations, but simply an aid to remind farmers who use the homeodynamic method of what they have already studied. The preparations are in our continuous development. In case of any discrepancy between the directions on the bottle label and these pages we recommend that you contact us.

THE FIRST TIME ONE USES THE HOMEODYNAMIC METHOD ON ONES LAND

When a soil is treated for the first time with homeodynamic products it is necessary to apply the treatments described in the box below. These will purify the soil and make it receptive to the rest of the sprays and seed baths. If the treatments described are not done, or they are not done in this sequence, then the sprays or the seed baths cannot exert their full influence.

TREATMENTS TO BE SPRAYED:

- 1 treatment with "Harmonizer and Purifier" (A01) (eg Monday of week 1 ...)
- 4 DAYS BREAK
- 1 treatment with "Harmonizer and Purifier " (A01) (... Saturday of week 1...)
- 4 DAYS BREAK
- 1 treatment with "Harmonizer and Purifier" (A01) (... Thursday of week 2.)
- 4 DAYS BREAK
- 1 treatment on a Thursday with the product "Electromagnetic fields Repel" (to be chosen among the three available agricultural versions: for low frequency electromagnetic fields (C60), for medium frequency EMF (code C61) or for high frequency EMF (C62). If there are only high voltage pylons around the property the low frequency product may be used; in case of aeriels for cellular telephones it is better to use the high frequency version. If in doubt, the high frequency version also "covers" the inferior frequencies. If the farm has nothing - not even small electric lines - it is still advised that you spray "Repel electromagnetic fields" in the low frequency version (C60).
- 1 treatment on Sunday with the product "Gold Harmoniser" (B79) if the soil has been ploughed deeply, leveled, in-filled or been subject to landslides.
- SOME DAYS BREAK
- 1 treatment with the preparation "Generic Plant Group Soul" (O 02)
- SOME DAYS BREAK
- 1 treatment with the preparation "Gold for the Transition" (R01) to connect fully to the new forces of Life on Earth.

When all these interventions are completed, the farmer can begin to treat the soil with the appropriate products for their farm and plants. For the right "maintenance" of the farm, the product "Harmonizer and Purifier" (A01) is sprayed once at every change of season on days of Taurus or Virgo (see our Agricultural Calendar). In the original interventions mentioned above the first spray with A01 should be applied on a day of Taurus or Virgo. Also spray the product "Electromagnetic Fields Repel" at every change of season to maintain this vital modern protection.

A reminder: do not use the same syringe to dose different homeodynamic products (or wash it 4 times with clean water and dry at least 24 hours before re-use it), otherwise a conflict is created in the message brought by the products.

Moreover, use only manual pumps without re-circulation which are free of chemical residues (or very well cleaned with hot water and 5% caustic soda).

FOR FURTHER EXPLANATIONS AND DETAILS WE RECOMMEND OUR BOOKS; "INTRODUCTION TO THE HOMEODYNAMIC METHOD", "HOMEODYNAMIC CULTIVATION HANDBOOK" AND "ASTRONOMIC AGRICULTURAL CALENDAR". YOU MAY ALSO DIAL OUR SUPPORT CENTER IN ITALY (+39) 0432 905724 FROM MONDAY TO FRIDAY FROM 9 TO 12 O'CLOCK (OR, IN ENGLISH, LEAVE YOUR ENQUIRY ON 0207 1934697 OR EMAIL 'HOMEODYNAMICS@CONSIDERA.ORG).

NOTE THAT THE HOMEODYNAMIC PRODUCTS ARE ONLY AVAILABLE TO MEMBERS OF L'ALBERO DELLA VITA WHO HAVE EITHER ATTENDED A BASIC COURSE OR UNDERTAKEN DETAILED STUDY OF THE THREE BOOKS MENTIONED ABOVE.

EUREKA - April 2008

Mechanical Equipment

Water Vitalizer for Agricultural use

Water is the basis of life, but today it is both scarce and of poor quality. Water's capacity to carry all the messages it comes into contact with makes it sensitive to pollutants which it then conveys to the plants and the soil. As a result it becomes necessary to improve the quality, which will then be relayed to the crops in the fields. After more than 10 years of research, Eureka has devised water vitalizers for agriculture and food processing. It is made of copper spirals containing a particular homeodynamic product, which can be fitted around irrigation pipes. In this way the water that passes through the pipes receives the message to purify and revitalize itself.

As can be seen from the resulting germination, this increases its wetting capacity six-fold. Every irrigation pipe requires 3 spirals: one at the beginning, one half way along and one at the end. To be sure how to apply them contact the association.

Note: see elsewhere in this catalogue for a vitalizer for domestic use.

The Cultivator

To make the work in vegetable gardens easier we have designed a hand use hoer on which you can not only attach hoeing blades but other work tools as well. It is suitable for amateur and semi-professional vegetable gardens.

Specification details

Construction: strong galvanized steel

Weight: about 15kg overall, occupying a space of 1950 cm x 60 cm

Handle: Can be folded to reduce bulk for transport (cm 1150 x 40x 40) and its height adjusted to optimize work output. It can also be moved sideways to the left and the right so as not to tread on work already done.

Wheel: equipped with a metal blade that cleans the wheel

Tool holder: with various slots so as to keep the tools at a safe distance from each other and the wheel. It can also be extended behind so you can attach other tools for multiple jobs (for example hoe plus seed drill plus rolling wheel) along a

number of rows together. The whole tool holder system can be adjusted to obtain the best angle for the tools to penetrate the soil.

The shafts can contain 3 other smaller shafts to broaden the work front (for example 5 hoes for 4 rows of carrots or other crops).

Tools: All tool parts which come into contact with the soil are made of stainless steel and the tools can be easily attached without the use of key wrenches or spanners.

The tools are:

- Hoes of different widths (15 – 20 – 25 cm)
- Sharp rippers (to break the soil)
- Rippers with duck foot shares (to lift the soil)
- Adjustable moulders for creating furrows for sowing.

We recommend that you keep to a set rhythm while walking and working with the machine.

CAPTION:

Copper spiral mounted on PVC irrigation pipe.

The Seed Bath

To help the seed connect with its individual principle of the species (the Group Ego).

Every seed, when it is placed in Mother Earth, undergoes a profound process of metamorphosis. The moisture and warmth rekindle the life latent in it and this life resounds in harmony with the life of the cosmos from which it comes. In reply to this desire for new life, the life of the cosmos permeates the seed until a new plant appears.

This dialogue is individualized by the individual Species Principle which gives birth to the life present in the seed.

Today this process is so deeply disturbed by physical, chemical, electromagnetic and genetic pollution that it has become necessary to reinforce the connection.

The seed baths presented here have been developed to do just that.

Their use can have the following results:

- A quicker germination
- A higher percentage germination
- Better smell and taste
- Greater nutritional value defined in terms of the plant's ability to help man resound with the higher worlds
- Greater resistance to parasites

GENERAL SEED BATHS

Generic protection Seed Bath (code S 00)

Purifies the seed from chemical residues and helps the future plant by protecting it from parasites. This treatment is suggested for all seeds that are not homeodynamically raised. It prepares them for further seedbaths. A pre-diluted version (S00D) is available for small quantities of seed.

Composition: yarrow, dandelion, biodynamic preparations, clay, gold and iron

Generic Production Seed Bath (code S 01)

For all types of growing methods. Connects all plants to the group self. Available in pre-diluted form (S01D) for small volumes of seed.

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Root Stimulation Seed Bath (code S 02)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Leaf stimulation Seed Bath (Code S03)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Flower Stimulation Seed Bath (code S 04)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Fruit Stimulation Seed Bath (code S 05)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

SPECIFIC SEED BATHS

a) for particular purposes

Seed Bath for Resistance to Dryness (code S 06)

Composition: biodynamic preparations, gold and clay

Seed Bath to Reduce Bloat from Leguminous Plants (code S 07)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Anti-parasite Seed Bath (code S 08)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Anti-humidity Seed Bath (code S 09)

Composition: yarrow, valerian, biodynamic preparations, gold and clay

Pollen Protection Seed Bath (GMOs) (code S 10)

This seed bath makes the plant particularly sensitive to recognising only the absolutely appropriate pollen. Shown to induce resistance to GMO pollen or plants of the same family sown too close that you do not want you cross, as often occurs (eg sweetened with cucumbers). We recommend that this preparation is combined with the "Security GMO pollen" (code Y05) during flowering.

Composition: biodynamic preparations, gold and clay

Seed Bath to Stimulate Nitrogen Fixation in Leguminous Plants (code S 13)

Composition: biodynamic preparations, gold and clay

Seed Bath for grassland for humus (code S 33)

Composition: aloe, myrrh

Seed Bath Against Lodging (code S 38)

Composition: biodynamic preparations, gold and clay

b) for essence producing herbs

Seed Bath for Oil in the Root (code S 40)

Composition: biodynamic preparations, gold and clay

Seed Bath for Oil in the Leaf (code S 41)

Composition: biodynamic preparations, gold and clay

Seed Bath for Oil in the Flower (code S 42)

Composition: biodynamic preparations, gold and clay

Seed Bath for Oil in the Seed (code S 43)

Composition: biodynamic preparations, gold and clay

c) for dyeing and aromatic herbs

Seed Bath for the Principle in the Root (code S 50)

Composition: biodynamic preparations, gold and clay

Seed Bath for the Principle in the Leaf (code S 51)

Composition: biodynamic preparations, gold and clay

Seed Bath for the Principle in the Flower (code S 52)

Composition: biodynamic preparations, gold and clay

Seed Bath for the Principle in the Seed (code S 53)

Composition: biodynamic preparations, gold and clay

How to use the seed bath

Dilute the product in a proportion of 1 in 40 and spray very finely at 3 ml per kilo of seed. Keep hermetically closed for **at least 24 hours** and then sow. If you are treating a small quantity of seed, you can dilute the product further and then spray a proportionately larger amount.

You can administer more than one seed bath (anywhere up to 4) leaving the container open **for 72 hours** between one bath and the next. In this way more messages will form a part of the future plant.

Seed Bath Dilution and Specific Dosages

Dilution 1:40 3 ml every kilogram of seed
0.3 ml every 100 grams of seed
0.1 ml every 30 grams of seed

Dilution 1:400 3 ml every 100 grams of seed
0.3 ml every 10 grams of seed
0.1 ml every 3 grams of seed

Dilution 1:4000 3 ml every 10 grams of seed
0.3 ml every 1 gram of seed
0.1 ml every 0.3 grams of seed

Remember not to spray more than the specified amount of Seed Bath

CAPTION: Spraying the seed bath

Homeodynamic Products

For agriculture, horticulture, gardening and the environment

Once the Seed Bath has been applied cultivation can begin. To encourage quality and quantity in the new life developing in the seed, things can be done: purification and harmonization of the environment to counteract the forces inimical to life, and to stimulate the various vital functions which we want to encourage in the plant.

The products we have developed are the following:

Harmonizer – purifier (code A01)

Composition: bone, vinegar, gold and clay

Enables the plant to come into closer contact with its ideal (or archetype) and thus benefit from the action of all the other products. The product is indispensable for all kinds of cultivation and helps eliminate residues of previous chemico-biological treatments.

Essential during the conversion of land to the homeodynamic method, this product is recommended for routine maintenance of the land by at least one treatment every change of season. It is also recommended whenever a crop suffers stress (hail, frost, excess water or heat, etc. .)

How to use: spray in dilution of 1:4000 at 40/50 litres per hectare on days of Taurus and Virgo at every change of season.

Gold Harmoniser (code B79)

Composition: gold and clay

To use when the soil has either been worked to some depth or been moved.

How to use: spray in dilutions of 1:4000 at 40/50 litres per hectare ideally on a Sunday.

Connection to the Group I (O02)

Composition: silica

For when one wishes to clear the connection between the growing plant and its species self.

How to use: spray in dilution of 1:4000 at 40/50 litres per hectare

Gold for the transition (Code RO1)

Composition: gold

A new generation of preparation designed to connect the plants to the new life forces now flowing in Nature.

How to use: spray in dilution of 1:4000 at 40/50 litres per hectare

Humus stimulant for dryland farming

Horn manure, harmonizer

Reinforced version of Pro-humus (B12) for developing humus in semi-desert land.

How to use: spray in dilution of 1:4000 at 40/50 litres per hectare. Spray once every three months on normal soils and once a month on particularly poor dryland soils.

Healthy concrete in Agriculture (B04)

Composition. Calcium and harmoniser

Concrete absorbs vitality from people and the plants. This product was developed for orchards and vineyards in which concrete posts are used.

How to use: spray in dilution of 1:4000 at 40/50 litres per hectare every 15 days or only once every three months when sprayed in a iambic rhythm.

Parasite Aggressiveness prevention (code B06)

Composition: gold, clay, ash and vinegar

This protects the plant and soil by forestalling attacks from parasites and weakening their intensity.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday or place the closed bottle in the middle of the field. In the latter instance the bottle covers 1000 square metres and lasts six months. Its action should be circumscribed with the product Gold to Confine Areas (code B 77).

Growth Slower (Dwarfer) (code B08)

Composition: gold, clay, biodynamic products

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare every three weeks on a Monday.

Tree Renewal (code B09)

Composition: vinegar, gold, biodynamic preparations

Brings new forces of life to old trees

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on the ground half a metre away from the reach of the foliage and around the whole crown at the beginning and end of spring.

Pro Humus (code B12)

Composition: horn manure, gold and clay

Carries manure forces to soils poor in organic substances, providing 60 / 70% of the substances needed, and works on the life of the soil.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday or on days of Capricorn.

Pre Sowing (code B11)

Composition: manure, vinegar, clay, quicklime, harmonizer, biodynamic preparations, gold and clay.

This works on the connection between the plant and the soil, on the germination of the seed, on the vitality of the soil, on how well grafts take, on root growth, vegetative forces and resistance to drought. Improves the metabolic capacity of the soil. Increases the yield

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday, if possible at the full moon. Repeat every month for the whole vegetative cycle.

Root Plus (code B13)

Composition: biodynamic preparations and harmonizer, gold and clay.

Stimulates the development of taproot plants (like carrots) increasing the quality and quantity of the yield.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare at the new moon and on a Thursday when the root has reached $\frac{1}{4}$ of its final diameter. Repeat 1 or 2 times (more if the soil is calcareous)

Pro Rooting of Cuttings (code B14)

Composition: biodynamic preparations, clay, vinegar and gold

Stimulates rooting.

How to use: Place the cutting in the product in dilutions of 1:4000 from 15 to 60 minutes if it is herbaceous or from 75 to 120 minutes if the plant is semi-ligneous or from 100 to 180 minutes for a woody plant, then replant.

Pro Bunching (code B15)

Composition: clay, chamomile, biodynamic preparations and gold

Stimulates the bunching/tillering of cereals, flowering plants and salads.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare at the beginning of the bunching period on a Wednesday. Normally one treatment is enough.

Pro Small Fruit Phase (code B22)

Composition: horn silica, vinegar, biodynamic products, clay and gold

Stimulates the development of the small fruit as it starts ripening.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday.

Pro Rising (code B16)

Composition: vinegar, biodynamic preparations, gold and clay

Stimulates the rising of the cereals

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare at the moment of rising on a Tuesday

Lodging Repel (code B17)

Composition: vinegar, biodynamic preparations, harmonizer, gold and clay

Reinforces the base of the cereals, making them rise in case of lodging.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare immediately after the lodging on a Monday. Repeat every second day as needed.

Pro Leaf Longevity (code B18)

Composition: chamomile, yarrow, manure, clay and gold

Stimulates the lengthening of the leaf stage of vegetable crops and increases their flavour.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Monday. Repeat every week.

Pro Blooming (code B20)

Composition: yarrow, clay, horn silica, biodynamic preparations and gold

Stimulates the spring flowering of fruit-bearing plants.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare at the beginning of the flowering , if possible on a Sunday. Otherwise in late autumn to sustain flowering in the next year.

Pro Fruit Setting (code B21)

Composition: chamomile, nettle, vinegar, biodynamic preparations, clay and gold

Stimulates the setting in fruit bearing plants.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare half way through the flowering on a Thursday.

Fruit Plus (code B23)

Composition: clay, biodynamic preparations, harmonizer and gold

Stimulates the development of the fruit, increasing both the quantity and quality of the crop.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday when the fruit is 1/3 to 2/3 the final diameter.

Pro Gluten (code B24)

Composition: gluten, biodynamic preparations, gold and clay

Stimulates an increase of the gluten in cereals

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Thursday about 20 – 30 days before harvest.

Pro Mixed Hayfield (code B26)

Composition: biodynamic preparations, gold and clay

Stimulates the regrowth and the quantity and quality of the crop

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Wednesday. Repeat after every mowing.

Pro leguminous Fodder Crops (code B27)

Composition: biodynamic preparations, gold and clay

Stimulates the regrowth and the quantity and quality of the crop

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Wednesday. Repeat after every mowing.

Pro Green Leaf (code B28)

Composition: magnetic iron and gold

Favours the succulence and strong colour of the leaf.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare once a month on a Tuesday afternoon. Repeat every 7 days as needed.

Pro Tree Longevity (code B29)

Composition: stibnite, clay, vinegar and gold

Stimulates the regeneration of old trees by about 10-15 years.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare at every change of season on a Monday: add it also to the paste for trees.

Pro Taste (code B30)

Composition: clay, biodynamic preparations and gold

Stimulates the plant to produce more flavour.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Thursday about 20 days before the harvesting.

Pro Sugar (code B31)

Composition: clay, biodynamic preparations and gold

Stimulates the plant and produces more sugar

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on days of fire or on a Sunday about 20 days before harvesting.

Pro Oil Fixation and Active Principles (code B32)

Composition: Biodynamic preparations, gold and clay

Prevents the loss of essential oil in cut medicinal herbs

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare when the plant has just been cut

Pro Grassland for Humus (graminaceous plants) (code B33)

Composition: biodynamic preparations, vinegar

Stimulates the natural capacity of graminaceous plants to produce humus

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday or Monday.

Root Apparatus Stimulator (code B34)

Composition: gold and clay.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on the growing plant on a day of Taurus.

Leaf Apparatus Stimulator (code B35)

Composition: gold and clay

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on the growing plant on a day of Scorpio.

Flowering Stimulator (code B36)

Composition: gold and clay

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on the growing plant on a day of Aquarius.

Fructification Stimulator (code B37)

Composition: gold and clay

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on the growing plant on a day of Leo.

Cicatrizant (code B55)

Composition: chamomile, nettle, bread, myrrh, harmonizer, humidity repellent, cold repellent, gold and clay

Stimulates the production of the callus after pruning

How to use: dilute 1 to 40 and make a paste with bentonite and sodium silicate (5%) and spread on the cut.

Pro Colour Fixation (code B56)

Composition: gold and clay

Prevents the loss of the dyeing agent in cut medicinal herbs

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare after cutting the plants

Pro Vitamin E for Grapevines (code B57) **and Apple Trees** (code B58)

Composition: St. John's wort, nettle and gold

Increases the production of vitamin E as much as 5-fold

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a day of Leo

Nitrogen Fixation for Leguminosae (code B60)

Composition: chamomile, nettle, algae, gold

Stimulates the natural ability of leguminosae to fix nitrogen in the soil

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare in the evening on a day of Taurus once a month.

Gold to Confine Areas (code B77)

Composition: gold

Creates an 'etheric wall' to screen the action of homeodynamic preparations that need to be diffused (not sprayed)

For details see the booklet for homeodynamic preparations

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare as needed.

The effect lasts for one month.

Gold for Protection (code B78)

Composition: gold

Protects the plants from stress, adversity, parasites and lack of harmony in the environment. Advised if a methane pipe-line passes through the field or “to shield” undesired effects caused from neighbours’ cultivations or treatments.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare on a Sunday.

Tree Hygiene (code B84)

Composition: gold

Encourages a dialogue between a tree’s various imperceptible components to encourage its health

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare at the change of season.

PRODUCTS TO STIMULATE THE TRANSFORMATIONS WITHIN THE MINERAL REALM

HOMEODYNAMIC PRODUCT FOR COMPOST PILES

Clay preparations for compost piles (Code B 42)

Composition: Horn-manure, gold and clay.

A clay preparation and the 500 preparation of A. Podolinsky.

Usage instructions: insert the closed bottle in the centre of the manure heap. One bottle is sufficient for heaps from 5 to 20 cubic meters and lasts for 3 years.

Also available in a diluted version (Code B42D) for heaps of 2 – 5 metres cube.

PRODUCTS THAT STIMULATE THE SOIL'S SUBSTANCE FORMING PROCESSES

The products enhance the zodiac's transforming action which govern the formation of the below mentioned substances in the soil. Spray products 3 times a year on a day of the related constellation or only once a year when both Sun and day are in the specified constellation (see the bottle label and the Astronomical Agricultural calendar for the homeodynamic method).

Pro-Nitrogen (code B 61)

Composition: nitrogen, biodynamic preparations, gold and clay.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare.

Constellation of reference: Taurus.

Pro Phosphorus (code B 62)

Composition: phosphorus, biodynamic preparations, gold and clay.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare.

Constellation of reference: Cancer.

Pro Potassium (code B 63)

Composition: potassium, biodynamic preparations, gold and clay.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare.

Constellation of reference: Virgo.

Pro Silica (code B 64)

Composition: silica, biodynamic preparations, gold and clay.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare.

Constellation of reference: Aries.

Pro Calcium (code B 65)

Composition: calcium, biodynamic preparations, gold and clay.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare.

Constellation of reference: Libra.

Pro Clay (code B 66)

Composition: clay, biodynamic preparations and gold.

How to use: spray in dilutions of 1:4000 in dosages of 40/50 litres per hectare.

Constellation of reference: Capricorn.

PREPARATIONS THAT REDUCE SOIL SUBSTANCES

These products restrain the zodiac's influence in the formation of the below mentioned substances in the soil.

Nitrogen Repel (code B 71)

Phosphorus Repel (code B 72)

Potassium Repel (code B 73)

Silica Repel (code B 74)

Calcium Repel (code B 75)

Clay Repel (code B 76)

Composition: biodynamic preparations, gold and clay.

Usage instructions: The same as those of the PRO products above.

Constellation of reference: The same as those of the relevant PRO products above.

PREPARATIONS FOR CLEANING UP AND PROTECTION OF PLANTS AND THE ENVIRONMENT

As previously mentioned, pollution plays a fundamental role in the Life of plants. In some instances of pollution the Harmonizer – Purifier (code A 01) is not sufficient and therefore it is best to use precise products.

Magnetic fields alter the metabolic processes of the leaf and consequently the entire plant.

Electric fields alter the processes bound to light, and consequently blossoming.

The following products have been created:

Low frequency (50 Hz) EMF Repel (code C 60)

Composition: biodynamic preparations, harmonizer, gold and clay.

To shield and protect plants from electric lines.

Usage instructions: dilute one part of product in 4000 parts of water and spray on Thursday and at every change of season. 40/50 litres per hectare.

Medium frequency (100 - 1000 Hz) EMF Repel (code C 61)

Composition: biodynamic preparations, harmonizer, gold and clay.

To protect the plants from the TV repeater waves.

Usage instructions: same as code C 60.

High frequency (exceeding 1000 Hz) EMF Repel (code C 62)

Composition: biodynamic preparations, harmonizer, gold and clay.

To protect plants from mobile phone repeaters' waves.

Usage instructions: same as code C 60.

Marine salt modifies the vital forces within the plant by inducing processes of dwarfism and sclerosis.

Sea salt Repel (code A 03)

Composition: sea salt, purifier, gold and clay.

When brackish water is used for watering.

Usage instructions: add 30 ml of product per cubic meter of water in a tank.

Pollens coming from genetically modified plants modify and induce a profound break away from the Individual Species Principle process. This disconnecting process will then resonate within mankind when he eats these plants.

Protection from OGM pollens (code Y 05)

Composition: vinegar, dandelion, yarrow, gold.

Usage instructions: dilute one part of product in 4000 parts of water and spray during blossoming, preferably in days related to Virgo at 40/50 litres per hectare.

The excess of lunar forces, due to abundant rain, will induce root asphyxiation, because water will drive away the oxygen from the soil. Oxygen is a basic element for the life of young roots.

Root Asphyxia Repel (code A09)

Composition: gold, clay and yarrow.

Use when the plants are suffering from root asphyxia due to over-watering.

How to use: spray in dilutions of 1:4000 at 40/50 litres per hectare on a Monday as needed.

Assistance for excessive lunar forces (code Y 09)

Composition: silica, clay.

Usage instructions: dilute one part of product in 4000 parts of water and spray preferably on Mondays at 40/50 litres per hectare.

On request personalized products for specific polluting elements can be prepared.

GENERIC PRODUCTS FOR PROTECTION FROM PARASITES AND WEEDS

In a holistic view of Nature the presence of a parasite is linked to many factors: errors in the agricultural practice, environmental imbalance, pollution, and even to the farmer's inner disharmony. This last aspect echoes with the spheres from which parasites originate, unconsciously drawing their presence to the fields. In this sense the parasite points out the internal work that must be done. Hence the parasite is not to be considered an enemy but a friend which tells our conscience, which is often appeased, what we could do better.

The solution certainly is not in killing the parasite, since the imbalanced situation will remain unresolved, but in understanding the message it brings and activating a process of internal growth.

The homeodynamic products function as an "aid" in the farmer's work by creating an environment unfavourable to the parasites presence and proliferation.

Parasite Repel (fungi, insects, bacteria, virus) (code Y 01)

Composition: biodynamic preparations, vinegar, gold and clay.

This product counteracts almost all types of parasites (fungi, insects, virus & bacteria) and functions on all types of soil.

For fungi, bacteria & virus

Usage instructions: Dilute one part of product in 4000 parts of water and spray on Monday at 40/50 litres per hectare.

Prevention: once every 14 days.

Cure: Begin on Monday and use the iambic rhythm, pause 2 days, then repeat the treatment, pause 2 days and once again intervene.

Maintenance: Once every 28 days

For Insects

Usage instructions: Dilute one part of product in 4000 parts of water and spray on Wednesday at 40/50 litres per hectare.

Prevention: once every 14 days.

Cure: Begin on Wednesday, using the iambic rhythm, pause 3 days, then repeat the treatment, pause 3 days and repeat once again.

Maintenance: Once every 28 days

Weed Repel (code Y 02)

Composition: bone, vinegar, sulphur, clay and gold.

Arrests the development of all types of weeds.

Usage instructions: Dilute one part of product in 4000 parts of water and spray on Monday at 40/50 litres per hectare.

Prevention: treat once every 14 days.

Cure: Begin on Monday, using the iambic rhythm, then pause 2 days, then repeat the treatment, pause 2 days and repeat once again.

Maintenance: Once every 28 days.

Parasite & Weed Repel (fungi, insects, bacteria, virus) (code Y 04)

Composition: biodynamic preparation, vinegar, gold and clay.

Works against most types of parasites (fungi, insects, bacteria and virus) and weeds and on all types of soils. This product works as a support to the meditations that must be done for parasite control. The meditations are in the publication, “Comprehend and cure parasites” book.

This product represents a fundamental step towards a new relationship with parasites.

Usage instructions: Consult the ‘Comprehend and Cure Pests’ book.

SPECIFIC REPELLENTS FOR HARMFUL ANIMALS AND WEEDS

In the light of what was set forth on the previous page, specific products have been made for particularly resistant parasites. The basis of these products are the ashes of the same pests which infest our fields, so as to transmit the specific message of repulsion for the environment where the product is sprayed.

Repel apple proliferation (scopazzi del melo) (Code C01)

Composition: Biodynamic preparations, oak bark, clay. Generic pest repellent

Use: 1:4000 dilution in 40-50 litres of water per hectare every two months throughout the year.

Bird Repel (code C 23)

Composition: biodynamic preparations, harmonizer, clay, vinegar and gold.

It keeps the birds away from the crops for 10 to 20 days.

Usage instructions: One part product in 4000 parts of water and spray 50 litres in fine drops on each hectare every 21 days, preferably on days of fire or on the Saturday prior to the new moon.

Do not treat the entire field with the repellent, but leave a part where birds can feed on.

Chestnut cancer & Ink disease Repel (code C 29)

Repel processionaria (Code C30)

No longer available. Use Code Y01

Field Mouse Repel (code C 34)

Composition: mouse ashes, yarrow, gold and clay.

Usage instructions: Dilute one part of product in 4000 parts of water and spray on a day of Sagittarius at 40/50 litres per hectare. If the field is of very large spray on the perimeter, but remember to leave a door open - where product is not sprayed, - to avoid trapping the mice in the treated field.

Horsefly Repel (code C 35)

Composition: horsefly ashes, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray preferably on Wednesday at 40/50 litres per hectare,.

Mole Repel (code C 36)

Composition: mole ashes, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray preferably on Monday, in trochee (treat two consecutive days and pause one day) for three times. 40/50 litres per hectare.

Boar Repel (code C 37)

Composition: boar ashes, harmonizer.

Usage instructions: the same as **Mouse Repel**, but on days related to Capricorn.

Cochineal Repel (code C 39)

Composition: cochineal ashes, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray preferably on Monday at 40/50 litres per hectare.

Mole cricket Repel (code C 43)

Composition: mole cricket ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40-50 litres per hectare preferably on Saturday or Sunday, but after having treated with A 02 at least once.

Codling-moth Repel (code C 44)

Composition: Codling-moth ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Wednesday.

Chestnut weevil Repel (code C 45)

Composition: weevil ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare. Begin spraying on a monthly basis 3 months prior to parasites appearance.

Flea beetle Repel (code C 46)

Composition: flea beetle ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Wednesday.

Hare Repel (code C 47)

Composition: hare ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday.

Goat moth Repel (code C 48)

Composition: **Goat moth** ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Tuesday

Nutria Repel (code C 49)

Composition: nutria ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on a Monday.

Cereal moth Repel (code C 51)

Composition: cereal moth ashes, clay, harmonizer and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Wednesday.

Mosquito (code C 53)

Composition: mosquito ashes, clay, harmonizer and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Tuesday.

Domestic fly Repel (code C 54)

Composition: fly ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Tuesday.

Field tick Repel (code C 56)

Composition: tick ashes, harmonizer, gold and clay.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday

Flea Repel (code C 57)

Composition: flea ashes, harmonizer, gold and clay.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday.

Shieldbug Repel (code C 58)

Composition: bug ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Wednesday.

Hornet Repel (code C 59)

Composition: hornet ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Friday.

Laurel cochineal Repel (code C 70)

Composition: laurel cochineal ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday.

Snail (Slug) Repel (code C 71)

Composition: snail ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday.

Cockchafer (May beetle) Repel (code C 72)

Composition: cockchafer ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Wednesday. Repeat for 3-4 days.

Olive moth Repel (code C 73)

Composition: olive moth ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Wednesday.

Olive knot Repel (code C 74)

Composition: Olive knot ashes, parasite repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday.

PRODUCTS THAT KEEP AWAY WEEDS

Spear grass (couch grass) Repel (code C 40)

Composition: spear grass ashes, weed repellent, harmonizer.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare preferably on Monday. Repeat after each time grass is cut.

Dock Repellent (code C 42)

Composition: dock ashes, anti-weed, harmonizer.

Usage instructions: same as product C 40.

MICROCLIMATE AND ENVIRONMENTAL PRODUCTS

To improve the climatic conditions of the cultivated environment

The climate and also the atmospheric factors play an important role in the life of plants. An environment exceedingly damp can contribute to the appearance of fungal diseases. The lack of light can impede plant formation or blossoming. The lack or excess of heat can inhibit the growth of plants and ripening of fruits. The impossibility of working directly on the climate spurred us to develop precise homeodynamic products which are capable of creating a “positive microclimate” around the plants, stimulating them to overcome the stress due to weather and environmental factors.

LIST OF PRODUCTS

Humidity Repel (code E 01)

Composition: vinegar, clay, biodynamic preparations, harmonizer and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare on the soil on Monday morning. Repeat every 7 or 14 days (according to necessity).

Light Repel (code E 03)

Composition: vinegar, harmonizer, clay, biodynamic preparations, yarrow and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare on Thursday morning.

Pro Light (code E 04)

Composition: horn-silica, vinegar, biodynamic preparations, harmonizer and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare on Thursday morning.

Heat Repel (code E 05)

Composition: vinegar, clay, biodynamic preparations, harmonizer and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare on Saturday morning.

Pro Heat (code E 06)

Composition: drone bee, vinegar, biodynamic preparations, harmonizer, clay and gold.

Usage instructions: Dilute one part of product in 4000 parts of water and spray 40/50 per hectare on Saturday morning.

We recommend not to exceed in quantity or number of treatments, the risk being blockage of plant's growth.

PREPARATIONS FOR THE 13 HOLY NIGHTS

To reunite the plant world to its spiritual Archetypes

During the 13 Holy Nights of Christmas the Archetypes and The Group Soul forces of plants and animals descend from the zodiac and the planets. Additional information can be obtained from the Manual or our publication “The 13 Holy Nights”.

Each night brings its own specific impulse for the whole of the following year: for example the night between Dec. 25th and the 26th corresponds to Taurus, and develops dry matter, roots and stems.

The night between Dec. 28th and 29th corresponds to Leo, and ripens fruit and improves its nutritional value.

The night between Dec. 30th and 31st corresponds to Scorpio, and it develops vigour, reproduction and the vegetative forces.

The night between January 4th and 5th corresponds to Aquarius, which enables the entrance of the idea and develops the form, resistance and on the aromas.

Remember that treatments given in the **evening** promote the **vigour**, while those sprayed on the following **morning** develops the **quality** (scent, aroma, preservation, nutritional capacity).

PRODUCTS FOR THE 13 HOLY CHRISTMAS NIGHTS

Composition of various products: all of the products are composed of biodynamic preparations, gold and clay, appropriately dynamized.

Opening The Group Souls (code G 01)

Spray the night of December 21st or 22nd or 23rd. The first year it is suggested to also treat between December 8th and the 15th.

Pro essential oils (code G 02)

Aries or Libra, Dec. 24th or Dec. 30th.

Pro soil structure (code G 03)

Taurus, treat on Dec. 25th.

Pro medicinal plants (code G 04)

Discontinued – use G06

Pro humus (code G 05)

Capricorn, treat on Jan. 3rd.

Pro dyeing and Aroma plants (code G 06)

Libra, treat on Jan. 5th.

Anti-GMO pollens (code G 10)

Pisces, treat on Jan. 5th.

Assistance for graminaceous and cucurbitaceous plants (code G 11)

Aries, treat on Dec. 25th.

Assistance for root plants (code G 12)

Capricorn, treat on Jan. 3rd.

Assistance for Herbaceous leaf plants (code G 13)

Libra, treat on Dec. 30th.

Assistance for leguminous, solanaceae and grassland (code G 14)

Cancer, treat on Dec. 27th.

Assistance for all vital functions (code G 15)

Discontinued. Use G34.

Pro-vigour (code G 16)

Sagittarius, treat on Jan. 2nd.

Pro flowering trees (code G 17)

Aquarius, treat on Jan. 4th.

Drought Repel (code G 18)

Cancer, treat on Dec. 27th.

Pro fruit bearing (code G 19)

Leo, treat on Dec. 28th.

Pro generic (code G 20)

A little assistance for everything. Sun, spray on the appropriate night to the crops in question (see Manual).

Pro timber trees (code G 21)

Taurus, treat on Dec. 25th.

Pro leaf trees (code G 22)

Scorpio, treat on Jan. 1st.

Gamic (ie sexually reproducing) weed Repel (code G 23)

Capricorn, treat on Jan. 3rd.

Agamic (ie vegetative reproducing) weed Repel (code G 24)

Cancer, treat on Dec. 27th.

Generic ground insect Repel (code G 25)

Taurus, treat on Dec. 25th.

Generic aerial insect Repel (code G 26)

Gemini, treat on Dec. 26th.

Generic fungi Repel (code G 27)

External fungi: Virgo, treat on Dec. 29th.

Internal fungi: Pisces, treat on Jan. 5th.

Generic bacteria Repel (code G 29)

Scorpio, treat on Jan. 1st.

Virus Repel (code G 32)

Taurus, treat on Dec. 25th.

Cold Repel (code G. 33)

Leo, treat on Dec. 28th.

Harmonizer – Purifier (code G 34)

A specific version for the holy nights. Do not substitute A01.

Taurus & Virgo, treat on Dec. 25th and Dec. 29th.

Pro Earth vegetalisation (code G 35)

Discontinued. Use Pro humus.

DATE	COSTELLATION
24/12	ARIES
25/12	TAURUS
26/12	GEMINI
27/12	CANCER
28/12	LEO
29/12	VIRGO
30/12	LIBRA
31/12	“second” LIBRA
1/1	SCORPIO
2/1	SAGITTARIUS
3/1	CAPRICORN
4/1	ACQUARIUS
5/1	PISCES

Be clear that the “Night” begins at 15:00 of the named day and ends at 15:00 of the following day.

ATTENTION!

It is better not to carry out more than 4 treatments on the same field during the 13 Holy Nights. Farmers must evaluate the most important interventions needed for their field and postpone other treatments to the next months.

PRODUCTS THAT SUBSTITUTE ZODIACAL ASSOCIATIONS

It is widely known that a subtle dialogue exists between plants, a dialogue that can help or inhibit. Companion planting originates from this. Often due to the necessities of growing these combinations are not honoured, hence the plants find themselves all “alone” to deal with difficulties or environmental adversities.

The products here have been made to bring the archetypal helping vigour to the plants, - the message of specific zodiacal forces to the various crops.

These products are sprayed in the customary manner: once in the blossoming phase of the plant, but it must be preceded by the relevant treatment during the 13 Holy Nights. If the **13 Holy Nights** treatment was not done, it can be substituted with 3 treatments of these sprays on the day of relevant constellation.

For more insight consult our publication on “Zodiacal Combinations”.

The products to be placed underneath the plant/trees will be found in the next page.

a) herbaceous plants

Herbaceous essential oil plants: assistance for production (Aries: code I02)

Composition: biodynamic preparations, gold and clay.

Medicinal plants: assistance for production (Cancer: code I04)

Composition: biodynamic preparations, gold and clay.

Dyeing and Aromatic plants: assistance for production (Libra, code I06)

Composition: biodynamic preparations, gold and clay.

Herby vegetable garden, arable and shrub plants: assistance for production of plants that directly capture the diffused Life (Aries: code I11) such as cucurbits, artichokes, cereals, hawthorn, etc.

Composition: biodynamic preparations, gold and clay.

Assistance for plants that reinforce the Principle of Species (Capricorn: code I12) such as carrots, sugar beets, heather, etc.

Composition: biodynamic preparations, gold and clay.

Assistance for plants with a strong link to The Group Soul (Capricorn, code I 12) that is concentrated in the root.

Composition: biodynamic preparations, gold and clay.

Assistance for the plants that catch the imponderable such as colour, active principles, etc (Libra, code I 13) such as crucifers, liliaceous, salads, etc.

Composition: biodynamic preparations, gold and clay.

Assistance for plants that help anchor the idea in the root and subsequently have it re-ascend (Cancer, code I14) solanaceae, leguminous, poppy, hazelnut, etc.

Composition: biodynamic preparations, gold and clay.

b) trees

Assistance for fruit trees (Leo, code I 19)

Composition: biodynamic preparations, gold and clay.

Assistance for timber trees (Taurus, code I 20)

Composition: biodynamic preparations, gold and clay.

Assistance for flowering trees (ornamental) (Aquarius, code I 21)

Composition: biodynamic preparations, gold and clay.

Assistance for trees with rich leaf apparatus (broad leaf) (Scorpio, code I 22)

Composition: biodynamic preparations, gold and clay.

c) various strengthening products

Assistance against external fungi and sucking insects, and plants and soil alkaloids (Gemini, code I 23)

Composition: biodynamic preparations, gold and clay.

This preparation is recommended particularly for the cultivation of plants with alkaloid, like the solanacee, or sulfur, like garlic and the onion, or the crucifere. The aim is to relieve the soil from their remnants.

Assistance against external fungi and biting insects (Sagittarius, code I 24)

Composition: biodynamic preparations, gold and clay.

Assistance to reinforce the vigour and metabolism (especially in the root and leaf) (Sagittarius, code I 25)

Composition: biodynamic preparations, gold and clay.

Assistance that reinforces the plant in all of its functions (strengthening the etheric body) (Gemini, code I 26)

Composition: biodynamic preparations, gold and clay.

The mark qualità omeodinamica ®

EUREKA has registered this name worldwide. it guarantees the use of the homeodynamic method of cultivation, processing and storage. This mark also includes devices made by us to vitalise water, the wall rosettes, the incense, etc. This is to ensure the correct application of all methods and techniques developed by EUREKA for maximum quality in all products made by the homeodynamic method.

qualità omeodinamica ® is applied in two different ways: one for agricultural products, and another for manufactured products. In agriculture the mark should be seen as a "secondary mark" because the farm must already be certified by an inspection body approved by the Ministry of Agriculture. In this case, the quality mark guarantees superior quality compared to standard organic.

In the case of other manufactured products not for human consumption, the mark is a brand. Please enquire for all necessary information about use of the mark.

INVIGORATING AND HYGIENE TREE PRODUCTS

(bottles to be placed underneath trees)

The product is supplied in a closed bottle of 10 ml and must be placed 50 cm underneath the tree trunk in correspondence to the axis of the trunk.

These products have a time-release stimulating action through the glass which last approximately 30 years.

PRODUCTS THAT SUPPORT TREES VITALITY

The components:

- **The Group Self:** to reunite the plant to its Individual Principle of Species
- **Pre-Sowing:** to stimulate the vitality (ideal for old trees or on poor/dry soils).
- **Tree Pro-Longevity:** (optional) for very old trees.
- **Fungi and insect Repel:** to prevent parasite attacks.

Composition: biodynamic preparations, gold and clay.

Fruit-bearing trees (Leo impulse, code Y 03/A)

Flowering trees (Aquarius impulse, code Y 03/B)

Broad leaved trees (Scorpio impulse, code Y 03/C)

Wood trees (Taurus impulse, code Y 03/D)

Hazelnut shrub (Cancer impulse, code Y 03/E)

Rosacean Shrub (Sun impulse, code Y 03/F)

SPECIFIC PEST PREVENTION PRODUCTS

Paste integrator for small tree trunks (grapevines) (code Y 11/A)

Composition: gold, parasite repellent, vinegar.

Usage instructions: add 0.15 ml of product, per tree, to trunk paste. Ask for the card regarding use.

Paste integrator for normal tree trunks (code Y 11/B)

Composition: gold, parasite repellent, vinegar.

Usage instructions: add 0.5 ml of product, per tree, to trunk paste. Ask for the card regarding use.

Paste integrator for old tree trunks (code Y 11/C)

Composition: gold, parasite repellent, vinegar.

Usage instructions: add 1 ml of product, per tree, to trunk paste. Ask for the card regarding use.

IMPORTANT: Please specify if plants are young or old when requesting products. In the case of old plants it is possible to renew their vitality by adding a precise product in the bottle.

On request it is also possible to add the preparation that defends against electromagnetic fields if the plant is already “known” to be protected. (hazel and maple trees).

SENSITIVE CRYSTALLIZATION

As it can be read in detail at page *** below, **EUREKA** has developed a method to evaluate the state of health, predisposition to disease, connection to the diffused Life and inclinations in general for plants and soils (in addition to animals and human beings). This is possible with the sensitive crystallization method that allows one to obtain various images pertinent to the factors indicated above.

In the case of trees the analysis is carried out with one bottle placed at the foot of the tree and one at the first fork of the branches. In this manner we can test the vitality of “Bios” (which is the biological strength) with the sample taken at the foot of the tree, and the vitality of “ZOE” (which is the link to the planetary and zodiacal forces) with the sample take at the first forking of the tree. As a results we receive an indication for which homeodynamic preparations to use on the farm.

‘EcoCentro’ project

In 1991 people from different parts of Italy decided to focus their efforts into concrete work to improve the conditions for Mother Earth and all her "guests."

Over time this group of people has focussed upon three centres of work:

The cooperative EUREKA researching and as a source of new ideas and impulses;
L’Albero della Vita Association which disseminates the results of EUREKA’s research;

The agricultural coop La Nuova Terra which applies and experiments with the homeodynamic method producing vegetables, fruits and cereals in the fields and greenhouse.

In 2006, it became apparent that a cultural centre was needed as a focus of spiritual knowledge of nature, art, healing and brotherhood: the House for Michael (dedicated to the spiritual being who promotes free and conscious activity). With free donations the House was built in 2008 and we would like to extend our thanks to all the members and friends who continue to support this.

In light of the increasingly rapid changes occurring in the global scene (loss of biodiversity, environmental degradation, economic crisis, climate change, etc.). our cultural center has become the heart of a larger project, called ‘Ecocentro’: a complex arising in Codroipo (Udine, Italy), around the house for Michael, that will include classrooms, laboratories, space for research, buildings for guest use, innovative structures for agriculture (tunnel, stables and farm), made with organic materials, in particular forms, with appropriate energy solutions. Our Ecocentro intends to be an answer to the situation that is emerging in the world, in order to create a place to learn, experiment and implement new environmentally friendly methods of agriculture that can sustain biodiversity, new low cost green building techniques within reach of all whilst capable of ensuring a higher quality living standard than current, new energy solutions for self-sufficiency, new methods of combating pollution (from physico-chemical pollutants, radar waves, electromagnetic fields, right up to GMO pollen, etc..), new systems of purification, revitalization and increased wetting ability of water and everything that could improve the quality of life for humans and the natural kingdoms.

To support the EcoCentro Project:
Associazione L’Albero della Vita

CCP: 76697341
Iban: IT 91G 07601 02200 0000 76697341
specificando la causale: "Sostegno Ecocentro"
Grazie a tutti

Sensitive Crystallization:

OBJECTIVE IMAGES FOR INVESTIGATING THE SUBTLE FORCES

The method of sensitive crystallization is designed on the advice of Rudolf Steiner in the 1920s to investigate the subtle forces that weave in the living world.

How it's done:

Sensitive crystallization is based on the flowing spiritual astral and living forces, that support every living being, captured in a substance that allows their visualisation.

In practice one places an aqueous sample (plant tissue, soil, drop of blood, etc..) so that the message is transmitted to the liquid. The solution is then added to a solution of copper chloride and everything is placed to dry in a special cabin at constant temperature and humidity.

During drying, the copper chloride is no longer susceptible to its own lines of forces, but but makes clear the 'subtle' forces of the sample. This results in images that, properly interpreted, show us which forces are present in the sample and in what intensities.

Interpretation

The great advantage of this method is that pathological forces found in the etheric plane will take weeks or months to manifest on the physical plane, so one can proceed to treatment in good time. We will have more time available if the pathologic process is present in the soul, and even more if the disharmony is present only in the spiritual plane. Conversely a disharmony on two or more planes will require a very fast intervention. To this we add that the crystallization occurs in two different ways: one to highlight the forces "Bios" (ie, more tied to the physical-etheric) and the other to highlight the forces of "Zoe" (ie, more tied to the soul-spiritual).

The conjoined interpretation of these two levels of crystallization gives us a comprehensive view of the current situation.

Range of applications

EUREKA currently performs such crystallisations on soil, plants, animals and people (upon the advice of a therapist), food, water, etc.

CAPTION:

Crystallization of a good homeodynamic soil. In summary we see that the center of crystallization corresponds to the center of the organization of vital spiritual and soul forces of the land. In this case it is single and well formed.

The forms in the shape of petals around the center represent the process called "solarization", ie when the soil receives the spiritual forces of evolution from the Cosmos. In the peripheral corona one can detect the individual zodiac influences that interact with the soil. In this case it is most evident in the area corresponding to the Fishes (left of center) and that of the Virgin (diametrically opposed to fish) on "the axis of healing."

PURIFYING SPIRALS

For cooking with gas to reduce pollution from fuel.

The problem with gas

Our sensitive crystallization tests carried showed that cooking food in an electric oven places the 'message' of the electromagnetic field into the food. To address this we have studied the medallions that you can find on [page. 31](#). To our surprise, when making a control for this test, we have seen how even the cooking in the oven fueled by gas gives practically the same results. This may be linked to the forces of darkness the gas carries, forces that inhibit the Light ether that manifests in people's capacity for discernment and understanding spiritual thoughts. Furthermore, the gas has suffered thousands of years of strong compression that gives it an "explosive" character destructive of organic structures.

Cooking with gas

The system that we developed to reduce the negative effect of gas (methane or LPG) is based upon a special spiral copper containing specific homeodynamic preparations. These spirals are used in agriculture to improve (significantly) the forces of water for irrigation.

The new spiral is wrapped around the gas pipe to create a specific force field, so that the flowing gas "loads" of the field thus improving its quality and that of the cooked food.

In contrast to the spirals for agricultural irrigation which need to be used in threes, the gas pipe needs only one spiral.

It is not necessary that the spiral adheres exactly on the gas pipe: there may be a tolerance of up to 10 mm on the radius. Inform the installer that the protective action of the spiral extends for about 20 meters of piping so is probably best as the pipe enters the house. This copper spiral is coloured dark blue, to distinguish it from our other spirals.

POLLUTION FROM CARS

We all know that driving the car is inevitably polluting, but often comfort and haste overcome our environmental conscience. There are also times at which the car is indispensable. Eureka has developed a homeodynamic preparation that can reduce the level of pollution in the exhaust gases, and in this case too the application is a copper spiral. We have coloured this spiral red to distinguish it from the other spirals we produce for food and agriculture. The spiral must be inserted around a fuel pipe but otherwise the location is irrelevant, and is applicable also to trucks and farm machinery. The spiral does not need to adhere perfectly to the pipe: there may be a tolerance of up to 1 cm on the radius.

AQUA VIVA

Water vitalisers: domestic and agricultural

Planetary water resources are extremely stretched. Climate change around the globe and the intensifying drought, emphasize the problem of quantity and quality. Also the question of widespread pollution, affecting the organoleptic characteristics of water, is certainly one of the main challenges for high-quality food.

From Eureka's various tests the vitality of water is severely compromised within 30-50 meters of iron pipe and only 10 meters if the pipe is plastic! This presents us with a choice: to drink and irrigate with contaminated and devitalized water, or support and purify water in accordance with the laws of life.

The vitaliser "AQUA VIVA" is based on results of our study of the flow of vital forces in the Earth which move in a clear pattern: a double circle. Two spirals of iron wound around the inlet and outlet complete the vitalisation and purification of the water.

The insertion of this form gives a completely new quality to the water. Passage through the first turn achieves purification and the second gives real vitalisation. It must be clear that the purification is achieved by "encysting": the unwanted pollutants are wrapped in an invisible "film" which means that the unwanted substances are not absorbed by the human. Therefore, from a perspective of life, it does not interact with the person.

Compared with other available devices with similar claims our vitaliser has the advantage that there are no magnetic fields, osmotic processes or crystals that are detrimental to the psychological and spiritual component of man because they are vehicles for the 'memory' of negative messages.

The water revitalized in this way maintains its vitality even after several meters of metal or plastic pipe, and is suitable for both adults and children.

Thanks to these properties the vitaliser "AQUA VIVA", as well as improving the organoleptic and subtle qualities of water makes it lighter on the palate, helps digestion and aids concentrate.

The vitaliser is made of stainless steel

Features of domestic vitaliser.

Version "standard"

stainless steel body 18/10;

inlet 1 / 2 inch standard thread;

No 2 spirals of iron wire (protected by a special resin);

size: diameter 24 cm, 5 cm thick;

weight 480 g.

Version "mini"

stainless steel body 18/10;

threads 1 / 4 inch;

No 2 spirals of iron wire;

size: diameter 11 cm, thickness 2.5 cm;

140 g weight.

Version "Portable" dismantlable for house and travel

active part in stainless steel 18/10;

support in foodgrade plastic;

No 2 spirals of iron wire;

mounting height: 46 cm;

disassembled size: 18x6x3 cm (plus funnel);

900 g weight.

The Aqua Viva standard vitaliser model gave excellent results on other liquids (wine, grape juice, apple juice, fruit juice, oil, milk for direct sales or for cheese) measured in increased shelf life, organoleptic quality, yield and taste. However, please request Eureka to impregnate the vitaliser for wine, juice, oil or milk.

One can read the results of our experiments in our complete brochures for the vitaliser and as available in our 'Water Dossier' publication. Besides a survey on the water, you can evaluate different tests with the vitalise applied to pipes of different material.

For technical and economic reasons it was impossible to make a vitaliser of this form large enough for agricultural irrigation. We have however studied the vitality from a spiral wrapped around the irrigation pipe (see [p.5](#)).

DEPOLLUTING AND HARMONISING WALL ROSETTES

The Wall Rosette protects against electromagnetic fields, physical-chemical pollutants, geopathy from WATER TABLES and FREM. Its influence extends for approximately 100 square metres and lasts for approximately 50 years.

The overall shape of the Wall Rosette takes its inspiration from the motif of the tortili columns, i.e. of the complex composed of the four spiralled columns (tortili) frequently present in sacred architecture. It suffices to think of the canopy of the altar in St. Peter's Cathedral, or simply of the "small altars" with this shape, typical of the Orthodox Church.

These four columns (in our case only their round base is represented) activate a process of internal dialogue with each other so as to create a lemniscate movement (or "harmonic eight"), a movement which is woven throughout the whole Cosmos; this, in fact, is the basis both of the planetary movements, and of the chemical and alchemical processes which take place in matter.

Since each one of these "columns" represents an element (Earth, Water, Air and Fire), we thus obtain the transformative dynamization of these elements, a transformation which also includes the world of geopathies connected with water (WATER TABLES (underground veins) and FREM (underground water coming from cemeteries and bearing negative aspects connected with the deceased)).

The square shape tends towards a circle in the central part and this is derived from this interlacing of influences represents the quintessence, the force which etherically activates vital processes. Given the resonance of the Wall Rose with the therapeutic Christic forces, this central element resonates with the fifth ether, the so-called "moral ether", or the new Life forces brought by Christ to mankind and to the Earth through the Golgotha event.

In order to further strengthen these processes, we have circumscribed the circles representing the four elements with a curved line, so as to impress a precise direction to these processes: the anti-clockwise direction, which is the direction which favours the "excarnation" of physical-chemical material substances and the "incarnation" of the therapeutic spiritual component.

The complex thus composed is then circumscribed by a circle (representing the unity of the spirit), having a diameter of 33 cm; thereby a measurement is included in which once again connects it to the therapeutic Christic forces. They are made from ceramic plaster so that the influence of the forces brought by the Wall Rose is preserved over time (a typical effect of lime and therefore of plaster, which is a calcium sulphate). Impregnation takes place with our homeodynamic products (based on meteoritic Iron), used to activate the depolluting process from physical-chemical substances, from electromagnetic fields (based on Bread, Milk, Gold, Incense, meteoritic Iron), and from geopathies. Another product (based on Bone, Vinegar and Gold) harmonises the whole, making it suitable for the different “types” of people and therefore also of benefit to children or debilitated people.

In order to optimise its action, it is good to position it on the Northern wall (or even better on the North-Western wall), the direction from which flow the purifying forces connected with the Water element.

Lastly, a natural colour was chosen (yellow gold), which attracts the Life forces surging from the Sun. The nuances in bright red lend special warmth to the device, making it even more effective.

The final finish using natural wax paints stabilises the action of the products over time, and ensures that the Wall Rose does not leave marks on walls or fabrics.

The Depolluting Wall Rosette can be positioned in the same room as the Wall Rosette for the immune system.

All the Wall Rosettes are made by hand, so that they spring from the “hand” of man.

WALL ROSETTE FOR SUPPORTING THE IMMUNE SYSTEM

This Wall Rosette reinforces the immune system, improving the influence of its spiritual component (The “I”) and its ability to organise the lower bodies.

Its action extends for approximately 100 square metres and works for approximately 50 years.

It is now well-known to many that, in human beings, healing is based on the synergic action between our spiritual component (Individual “I”) and our vital organisation (or etheric body). It is from their ability to interact that the influence which resists negative or disharmonic psychic forces is derived. These forces, interacting with physical-chemical polluting factors, determine the onset of the various pathologies.

In order to facilitate the solution to this problem, we have created a Wall Rose which sustains the immune system, the shapes of which activate a deep strengthening process of the synergy above.

The overall shape of the Wall Rose takes its inspiration from the motif of the Mercury caduceus, repeated four times, i.e. from the shape which is the symbol of the harmonious weaving of the forces of the physical, etheric and soul body in man. The central line present in each of the caducei represents the human “I”, or the spiritual component which crosses, connects, organises and harmonises all three of the lower bodies.

These four forms are then connected to each other so as to determine a unified flowing motif.

The whole of the various articulations gives rise to various lemniscate movements (or “harmonic eight”), a movement which is woven throughout the whole

Cosmos; this, in fact, is the basis both of the planetary movements, and of the chemical and alchemical processes which take place in matter.

It is for this reason that it exerts a stimulating action on all the vital processes in man and within the environment.

In order to further strengthen these processes, we have circumscribed the circles representing the four Caducei with a wavy curved line, so as to impress a precise direction to these curing processes: the anti-clockwise direction, which is the direction which favours the “excarnation” of physical-chemical material substances and the “incarnation” of the therapeutic spiritual component.

The complex thus composed is then circumscribed by a circle (representing the unity of the spirit), having a diameter of 33 cm thus including a measurement which once again connects it to the therapeutic Christic forces.

Having thus identified the shape, three choices remained to be made: the material, the impregnation and the colour. The material from which it is made is a ceramic plaster, so that the action of retaining the forces brought by the Wall Rose is preserved over time (a typical effect of lime and therefore of plaster, which is a calcium sulphate). Impregnation takes place using our homeopathic products, used to activate the process of strengthening the action of the “I” (with a product based on Gold). Another product (based on Bone, Vinegar and Gold) harmonises the whole, making it suitable for the different “types” of people and therefore also of benefit to children or debilitated people.

To optimise its action, it is good to place it on the Southern wall (or better still on the South-Eastern wall), the direction from which the healing forces connected with the Fire element originate.

Lastly, a natural colour was chosen (ultramarine blue combined with purple red), which attracts the etheric forces springing from the Sun, “heated” by the warmth of the “I”.

The final finish with natural wax paint stabilises the action of the products over time, and ensures that the Wall Rose does not leave traces on walls or fabrics.

The Wall Rose for supporting the immune system can be positioned in the same interior as the depolluting Wall Rose.

All of the Wall Roses are made by hand, so that they spring from the “hand” of man.

TWO NEW WALL ROSETTES

EUREKA's research has developed two new rosettes to counteract two other forms of domestic disharmony; the pink one interacts with domestic lighting, the green one interacts with clashing noises. Thanks to the study of forms that are particularly resonant with the positive aspect of light and sounds we can address artificial lighting in the house – above all from the television and computer, low energy lights and LEDs – and acoustic pollution.

The first rosette is pink and amplifies the positive aspects of light. It develops a particularly positive influence on the upper subtle bodies of man, particularly on the energetic physical body of man (also known as the ‘incorruptible body’) on the resonance between the morality of the etheric body and the forces of evolution which are particularly active today. Its influence can be enhanced by a nearby bees wax candle (which burns and liberates the forces of light and warmth) and by the aloe plants – as well as limiting the use of the above appliances. This wall rosette is available now.

Disharmonious noise relates not so much to light as to chemism (also known as the Sound ether), the ordering and organising ether, of which music is an expression. Living in a noisy environment (the center of a city, the proximity of a motorway or a railway) causes stress and nervousness that can also lead to various disorders .

This new blue-green Rosette is designed to draw reharmonising forces from the water element, in which the Sound ether is manifest, in order to balance this disharmony.

The Rose Green is not available as the time of printing this catalogue, as the first prototypes have just been made. For further information call us.

Both these Rosettes are made up of plaster appropriately dynamised so the influences of the rosettes effects are preserved in time. They are also impregnated with specific homeodynamic preparations that boost their influence and are made entirely by hand, so as not to carry "memories" of industrial processes, but only for the care and hard work of man.

OTHER EUREKA PRODUCTS

KEY CHAINS

Modern life brings physical and psychological stress from exposure to 'electrosmog' from computers and TV, EMF, mobile phones, and more. Even travelling by car, train or plane doesn't help us, because these "passive" movements cause a laziness of our "subtle" bodies, and for this reason we find ourselves weak and 'spaced out' at the end of a journey. For all these cases we have developed protection through the creation of a special medal or key holder. The medal has developed out of our study of harmonic forms. We have applied this to the creation of our two 'rosettes'; one to mitigate environmental pollution and the other to support the immune system.

It is particularly recommended for those who travel a lot or work in strong electron-magnetic fields. To strengthen the effect, the medal has been treated with our homeodynamic preparation, "Harmonizer-Purifier".

Finally all the devices are dynamized by hand to be carriers the hygienic effects. The protection does not diminish with time, and the rosettes radiate over about a 3m radius. More information comes with the leaflet enclosed with the medallion.

WE EMPHASISE THAT THE MEDAL/KEY HOLDER IS NOT AN AMULET OR A TALISMAN

Little medallion button

Our medallions against electromagnetic fields caused by electrical equipment derive from the study of harmonic forms that we have already applied to our yellow rosette for housing, to facilitate the purification of food cooked in an electric or gas oven, or stored in a refrigerator. It offers protection to the user of any electrical appliance.

To reinforce the effect of the coin is treated with our homeodynamic preparation "repel electromagnetic fields", and is finally potentised by hand in order to further enhance the influence.

Use: Use the sticky pad that comes with the little medallion in compliance with the distances indicated. The protective influence does not diminish over time.

Protection from the effects of the mobile phone.

Our medallions against electromagnetic fields caused by electrical equipment derive from the study of harmonic forms that we have already applied to our yellow rosette for housing, to facilitate the purification of food cooked in an

electric or gas oven, or stored in a refrigerator. It offers protection to the user of any electrical appliance.

To reinforce the effect of the coin is treated with our homeodynamic preparation "repel electromagnetic fields", and is finally potentised by hand in order to further enhance the influence.

Use. Apply the medallion on the back of the phone with the adhesive pad, on the outside and at the top of the battery compartment. The little medallion does not affect the ability of the phone to work and its own influence does not diminish over time.

SKIRTING BOARDS

The skirting that we propose arises from the study of the harmonic proportions applied to the three aspects of man: Thinking (man of the head), Feeling (man of rhythm) and Willing (man of metabolism). The harmonic blending of these forces determines the basis for the healthy cultural-spiritual, juridical-social and economic-productive life of human beings.

Our houses are often not built in such a way as to favour this harmonic interaction (both in the materials used and in the shapes with which they are configured) and therefore do not encourage the complete and harmonic development of human beings in all their faculties.

It is for this reason that we have created a skirting with a particular shape. A multiple beneficial effect (spiritual, soul and vital) is thus achieved, both to the benefit of the building and to those who use it.

This positive effect is combined with the action brought by the material from which the skirting is made: solid first-choice pine. Pinewood is the bearer of a deep relationship with the world of heat and, therefore, lends itself perfectly to providing these new impulses of life.

The skirting is supplied plain, so that each person may impregnate it with their preferred colour. Natural paints are recommended, in order to strengthen its action.

Measurements: the skirting is 72 mm high and is supplied in 2-metre strips.

LAMP SHADES

Thanks to the studies conducted to date regarding the action of shapes (in this case, the three circles which determine a triple Vesica Piscis and which also attract the forces of heat and enthusiasm), in order to provide a screen against the action of electromagnetic fields and, in general, to harmonise spaces, we have created a lamp which works to this purpose.

The particular colours of the veils attract the three “splendid colours” which bring an irradiation of spiritual light in the room.

CAPTION:

EUREKA’s Key holder shown besides the blue rosette and on the opposite side the yellow rosette..

EUREKA INCENSE

TO ENHANCE MEDITATIVE PRAYER

The incense is designed to promote the development in the right environmental conditions for concentration and meditation and are produced by hand under our direct control in India, ie in the country that boasts the greatest tradition in the production of incense.

EUREKA’S research

The various components have been verified using sensitive crystallization that investigates the subtle forces of a substance. In addition to the individual components the finished product was also checked to achieve the ideal formulation to support, in this case, the ability to concentrate in prayer and meditation. This means that the subtle bodies of man are encouraged to enter into a state of resonance with the present moment so that the inner forces are not disturbed by things that normally distract but can more easily focus on the subject of prayer or meditation.

To further reinforce this effect, to the characteristic Indian components of incense there is a homeopathic product specifically developed by EUREKA. Like any incense, also, this incense has a preliminary to the purification of air and the environment.

Use

Ignite the incense and then extinguish the flame. The smoke will spread the influence of the incense within the surrounding environment. There are no contraindications. Before lighting the incense is always good to do a small meditation.

The package is particularly advantageous because it contains 25-28 pieces of 25 g. The irregularity stems from the fact that the incense are handmade and therefore vary slightly from one another.

PRODUCTS FOR THE HOME AND FOR BUILDINGS

This line of products is proposed as an aid towards improving the quality and liveability of places (household and working environments, etc.), both in their hygienic and in their appearance.

VERSIONS

The preparations are available in a variety of versions:

Version “A” (Interiors – Ambiente in Italian); this is used by keeping the closed bottle (60 ml) in the space to be effected. Its influence lasts for approximately 6 months from the time of its activation. These “Interior” version preparations are “activated” simply by formulating a suitable thought when placing them in the space to be protected, even simply a “Start working!” thought. The irradiation of the preparation throughout the space is made possible by two factors: the micro-porosity of glass and the humidity of air.

By placing any of the “Interior” version preparations on a Hartmann node, its positive action can be irradiated by means of the Hartmann network, thus spreading throughout the house. For a description of the Hartmann network, please refer to the explanation accompanying preparation H 06. The “Interior” version preparations irradiate for approximately 100 m² on a single floor. If the building has wooden floors, the action also irradiates through two floors.

Version “C” (Cement): this version should be used as an additive in the cement mix (in the concrete mixer), using 60 ml for every 3 m³ of concrete. Its influence should not diminish over time (decades and decades).

Version “M” (Mortar): if the preparation is included in the mortar at the time in which the building is being constructed, in the dose of 60 ml for each 3 m³, its action will last for an unlimited amount of time (decades and decades).

Version “P” (Paint): if included in the paint in the dose of 60 ml for each 50 kg of diluted paint, the preparation works for 10 years. Simply add the preparation into each coat of paint.

Version “S” (Spray): a spray in each corner of a 4x4 m room works for a day. For bigger rooms, increase the number of sprays proportionally.

You should not put more than three different preparations in the same environment. Contact us if you have questions.

LIST OF HOME CONSTRUCTION PRODUCTS

Healthy cement (code H 01)

Composition: lime, harmonizer, basil and mint essential oil

This preparation cancels out the negative effects of cement and of lime. These two substances carry a message with them that absorbs vital forces and, therefore, from a “subtle” point of view are badly suited for the construction of houses. This preparation screens the disturbing action of cement, allowing vital forces to pervade the interiors, restoring the vitality that cement removes. As a secondary effect, it increases the life of the building. It is available in the versions H 01 A, H 01 C, H 01 M, H 01 P.

For instructions for use, refer to the note above.

Harmonizer and depurator (code H 02)

Composition: harmonizer, lemon essential oil

This preparation purifies interiors from the interference and disturbance caused at all levels by the presence of disharmonic forces. These disturbances may manifest themselves with difficulty in concentrating, excessive susceptibility, a sense of anxiety, fear and similar, and even in sickness. The action of the preparation helps to re-harmonise the space, providing protection against the forces which tend to bring disharmony into the subtle planes. It is available in the same versions as the previous preparation (H 02 A, H 02 C, H 02 M, H 02 P).

For instructions for use, refer to the introduction.

Humidity Repel (code H 03)

Composition: biodynamic preparations, harmonizer, mug weed essential oil

The preparation acts by reducing the unpleasant effects of humidity in the interior (mould, rusting, etc.) and on people, helping them not to suffer its effects and re-establishing the normal vital balance. It is available in the versions H 03 A, H 03 C, H 03 M, H 03 P.

For instructions for use, refer to the introduction

Heat Repel (code H 04)

Composition: biodynamic preparations, harmonizer

The preparation works by reducing the unpleasant effects of excessive heat in the room and on people, helping them not to suffer its effects and re-establishing the normal vital equilibrium.

It is available in the versions “Interior” and “Mortar” (H 04 A, H 04 M).

For instructions for use, refer to the introduction

Cold Repel (code H 05)

Composition: biodynamic preparations, harmonizer

This preparation works by reducing the unpleasant effects of excessive cold in the room and on people, helping them not to suffer its effects, attracting the etheric forces of heat and re-establishing the normal vital balance.

It is available in the versions “Interior” and “Mortar” (H 05 A, H 05 M).

For instructions for use, refer to the introduction

Protection against Hartmann (code H 06)

Composition: harmonizer, cypress essential oil

The Hartmann network is a grid made up of “walls” of subtle forces present more or less evenly throughout the whole Planet Earth which, in itself, is a neutral vehicle; as such, however, it can be travelled both by positive and by negative impulses (although normally, unfortunately, the second prevail), which it carries and amplifies. If a negative message is present in the place, borne by the Hartmann network, it can seriously reflect on its inhabitants (loss of vitality, tiredness, sickness). Thanks to its harmonising action, the preparation is capable

of “cleansing” the network of even the most negative messages, inserting a cleansing impulse into it, which irradiates through the whole building by means of the “walls”.

It is only available in the “Interior” version (H 06 A), and is used by placing the bottle on the Hartmann “wall” or, if possible, directly on the node, so as to take advantage of the irradiating power of the Hartmann network itself.

Protection against Curry (code H 07)

Composition: harmonizer.

This preparation works in the same way as the previous one, but based on the Curry network. This is an electric network with a 45° orientation with respect to the Hartmann one. The Curry network is mobile and, therefore, the benefit gained by moving the furniture or beds on which it passes does not apply, as it does for the Hartmann one. The bottle should therefore be placed in the interior where on its own it provides protection against the electrical fields of the Curry network.

It is available in the “Interior” version (H 07 A).

Protection against faults (code H 08)

Composition: harmonizer

The preparation works by providing protection against the negative effects caused by underground faults (fissures in the rocks). The faults are in fact “channels” for the underground forces originating from the inner spheres of the Earth towards which they open; the combined action of the fault and of the water can cause imbalances in the nervous or endocrine system. By placing the closed bottle in correspondence with the entrance of the fault in the building or, in any case, in the place in which the negative effects are felt, the preparation protects the space from the “subtle” interferences coming from the fault.

It is available in the “Interior” version (H 08 A).

Protection against water table issues (code H 09)

Composition: harmonizer

The preparation works by protecting against the negative effects caused by underground water tables. Water tables are, in fact, bearers of the forces collected and “memorised” by water, as well as of the discomfort generated by humidity; by

placing the closed bottle at the mouth of the water table, or otherwise in the space in which the negative effects are felt, the preparation protects the place from the “subtle” interferences originating from the water table.

It is available in the “Interior” version (H 09 A).

Protection against FREM (code H 10)

Composition: harmonizer

In bio-construction, the underground FREM fields constitute one of the greatest problems concerning the presence of “subtle” forces. FREM’s are consequences of the fact that an underground water vein passes under a cemetery and then – proceeding – passes under a house, often bearing negative messages coming from the bodies of the deceased. These messages can create extremely serious situations of subtle imbalance in the inhabitants of the house. This preparation, made using a particularly effective dynamization, succeeds in contrasting the heavy disturbing action of the deceased, returning the harmony jeopardised by their action to the interior. Moreover, the preparation helps to vehicle forces of love to the deceased, as an aid to their state.

It is available in the “Interior” version (H 10 A).

General house protection (code H 11)

Composition: vinegar, lime, harmonizer, essential oils of basil, mint, lemon and thuja.

This preparation combines the action of Healthy Cement (H 01), of the Harmonizer and Depurator (H02) and of the preparation for Protection against High Frequency Electromagnetic Fields (H23).

It is available in the “Interior” version (H 11 A) and in the “Paint” version (H 11 P).

Air revitalizer (code H 12)

Composition: vinegar, harmonizer, coriander essential oil.

The air that we breathe is crossed by a multitude of “subtle” forces. It can easily happen, especially in places in which the air is isolated, stagnant, or in places in which intense activities of a repetitive or mechanic nature are performed, or again in crowded places or places which are saturated with deadly forces (computers,

“dead” thoughts, uncreative activities, malcontent or boredom), that the “subtle” quality of air loses its vital forces and thus becomes “heavy”. This preparation works by attracting the vital forces which are of use in improving the quality of the thoughts, moods and creative faculties within the space and, specifically, within the air.

It is available in the “Paint” version (H 12 P) and “Spray” version (H 12 S, where one spurt in each corner revitalises the air in a 4x4m room; for bigger rooms, increase the spurts proportionally).

For instructions for use, refer to the introduction.

Activator for cesspits – white waters (code H 13)

Composition: white waste water, harmonizer

This preparation facilitates the processes of cesspits and maintains them active over time. It is used in the dosage of 5 ml for each cubic meter of mass, every 7 days for 4 times. It is then repeated once a month.

Activator for cesspits – black waters (code H 14)

Composition: imhoff waste water, harmonizer

This preparation facilitates the processes of cesspits and maintains them active over time. It is used in the dosage of 5 ml for each cubic metre of mass, every 7 days for 4 times. It is then repeated once a month.

Mould Repel (code H 15)

Composition: biodynamic preparations, anti-parasite agent, harmonizer.

This preparation is a strengthened and targeted version of the Humidity Repel (H03); it works by hindering and re-equilibrating the forces which lead to the development of mould, i.e. of the forces connected with an excessive gesture of condensation and uncontrolled vitality in the space.

It is available in the versions “Interior”, “Mortar” and “Paint” (H 15 A, H 15 M, H 15 P).

For user instructions, refer to the introduction

Protection against low frequency Electromagnetic Fields (EMF) (50 Hz)

(code H 21)

Composition: biodynamic preparations, harmonizer, thuja essential oil.

EMF's (Electromagnetic Fields) constitute an important disturbing agent for the plane of vital forces. In fact, artificial electricity and magnetism corrupt specific vital forces, obstructing their action to greater or lesser extents.

The preparation works in such a way as to screen the space from electromagnetic forces.

This version protects from fields working at low frequencies, such as those created by household appliances, by the electricity system and by long-distance power lines.

It is available in the "Interior" and "Paint" versions (H 21 A, H 21 P).

For user instructions, refer to the introduction

Medium-frequency EMF Protection (100-1000 Hz) (code H 22)

Composition: biodynamic preparations, harmonizer, thuja essential oil.

This preparation works in the same way as the previous one, but screens against medium frequency fields, i.e. those generated by televisions and computers.

It is available in the "Interior" and "Paint" versions (H 22 A, H 22 P).

For user instructions, refer to the introduction

High-frequency EMF Protection (greater than 1000 Hz) (code H 23)

Composition: biodynamic preparations, harmonizer, thuja essential oil.

This preparation works in the same way as the previous ones, but protects against high frequency fields, generated by microwaves and mobile phones. For microwaves, the "Interior" version (H 23 A) is used, whereas the "Spray" version is used for mobile phones (H 23 S). In the latter case, simply spray the inside of the case, or place a thin plaster inside the battery space of the phone, and spray two spurts of the preparation. At this point, re-close the mobile, and the protection will last for two weeks. While the mobile phone is in use, the preparation protects against the field generated; when the mobile is on but not in use, the preparation also works as a depurator of the electromagnetic fields that surround us.

The H 23 S version can also be used by holding the bottle in your hand during the conversation.

For user instructions, refer to the introduction

Protection against magnetism and radioactivity (code H 24)

Composition: lime, harmonizer, rosemary essential oil.

The forces of artificial radioactivity constitute the worst corruption of life forces present today on the Earth. This preparation, therefore, completes the previous anti-EMF products (H 21, H 22, H 23), protecting people and places from magnetic and radioactive forces.

It is available in the “Interior” version (H 24 A) and “Paint” version (H 24 P).

For user instructions, refer to the introduction

Gold for protection – bed impregnation (code H 25)

Composition: harmonizer, lemon essential oil.

Gold is the metal which acts as material support on the terrestrial sphere for the action of the forces of the Sun. The forces of Life and of growth, which permit the evolution of the Earth, originate from the Sun. This preparation, dynamised so as to bear the forces coming from the Sun, helps to harmonise the place from all kinds of geopathy or imbalance, as well as create an extremely efficient protection against all kinds of external interference. This is the action of the “Interior” version (H 25 A), which is used by keeping it under the bed at the height of the solar plexus, in order to be protected during the delicate time in which we are asleep (for double beds, place two bottles underneath).

The “Bed” version (H 25 L) is used to impregnate the bed of our design, “Dream Protection”, enhancing its protective action. It can also be used to impregnate other beds or furniture.

For user instructions, refer to the explanatory sheet enclosed with the Dream Protection bed.

Vitality activator (code H 26)

Composition: vinegar, lime, harmonizer.

For a variety of reasons, a place can find itself impoverished of vital forces.

This preparation attracts new vital forces into the place, thus bringing health and hygiene. It also “activates” the etheric action of heat (refer to the lecture notes “The quality of living”).

It is available in the “Paint” version (H 26 P).

For instructions for use, refer to the introduction

PESTS

It is necessary to emphasize some basic knowledge regarding the problem of parasites and harmful insects. Each type of parasite or “undesired guest” is, in fact, brought on by an imbalance, as a result of which the beings “of life” which are normally present in the environment are replaced by “nasty” beings. All of these beings “of life” reveal their presence through physical “partners”, i.e. they link their action to certain physical beings (pests) with which they work in symbiosis, as a pair.

The anti-pest preparations or repellents work by attracting the presence of the positive beings “of life” that correspond to those “nasty” ones, which had attracted the parasites.

We remind the reader that the curative action is strengthened when the effects of the preparation are integrated by meditation, aimed at establishing a “dialogue” with the entities which oversee the evolution of the parasites themselves. This “dialogue” may go from a simple “Thank you” for their presence, in which we bring consciousness to a situation of exterior or interior disorder, to actually helping them in their transformation and evolution. In any case, one should never “attack” the parasites with ones thoughts, in that they are not the “enemy”, but are merely indicators of imbalances.

Having said this, the efficacy of an anti-parasite preparation is strictly connected with the awareness of the problem that the user has developed. For this reason, the preparations for controlling parasites give the best results to those who have already had experience with the homeodynamic methods.

For more details and indications, refer to our two-part works: “Understanding and Curing Pests”.

Method of use

All the repellent preparations, from H 30 to H 56, should be diluted in the dosage of 30 ml in 0.5 l of water, and finely sprayed over 100 m² of floor; alternatively, the exposed parts are rubbed with a few drops of diluted product. They can also be used as an “Interior” version; in this case, their efficacy lasts for 6 months.

Products for controlling pests

Composition: ashes, harmonizer

These preparations work by re-harmonising the forces which led to the proliferation of parasites in an environment.

Mite **Repel** (acarides) (code H 30)

Ant **Repel** (code H 31)

Household fly **Repel** (code H 32)

Black beetle **Repel** (code H 33)

Scorpion **Repel** (code H 34)

Woodworm **Repel** (code H 35)

Mouse **Repel** (code H 38)

Mosquito **Repel** for house and garden (code H 39)

Mosquito **Repel** personal spray (code H 39S)

Cereal butterfly **Repel** (code H 41)

Weevil **Repel** (code H 42)

Cockroach **Repel** (code H 43)

Tick **Repel** (code H 56)

PRODUCTS FOR FOOD

To nourish people's body, soul and spirit

We are all aware of the importance of nourishment during the biological and spiritual life of a human being. Each kind of food, in fact, has two primary effects on us: the first is of a "physical" nature, connected with its constituents and with the polluting agents that, unfortunately, it often contains; the second is of a "subtle" nature, in that each kind of nutriment carries into us particular resonances with the spiritual spheres from which it originates.

The food line was created to improve the organoleptic characteristics, vitality and wholesomeness of foods.

Almost all of these preparations are available in the "Spray" version (we remind the reader that 2 spurts correspond to 0.3 ml of the preparation).

Anti Vacuum (code L 10 / 1)

Composition: Vinegar.

The vacuum, removing the air, brings forces to food which are contrary to life. In order to eat a food that supports man in his vital component one must revitalize the food vacuum.

This preparation can also be used in the process of industrial food processing.

Contact us for further information.

Use: Spray the prepared food from the vacuum in the dose indicated on the label after you opened the package. For maximum effectiveness we recommend that you reseal the package and leave the preparation for 20 minutes before eating the food.

Food Plus (code L 19)

Composition: biodynamic preparations, harmonizer.

This preparation works by purifying the food of the negative "subtle" forces present in it, which may have been generated by the low quality of the raw materials used (vegetables cultivated using chemical agriculture, mistreatment suffered by the livestock or shock caused by butchering, etc.), or by the working techniques employed (machine working which enters deadly forces), or yet again

by the emotional imbalances of the people who participated in making the food. The preparation purifies from these forces, giving the food harmony, taste, aroma and quality.

The preparation comes in the “Spray” version.

Bread making improver (code L 20)

Composition: biodynamic preparations, harmonizer.

This preparation works on bread made by means of sourdough. It works by bringing forces of quality and life into the dough, consequently improving its fermentation and leavening, as well as its appearance, aroma and taste, enhancing the “subtle” qualities which support a human being’s upper bodies. Bread is, in fact, the vital nourishment par excellence, and bread of a poor quality (physical and “subtle”) can disturb the harmony of our higher constituents.

The preparation is used in the dosage of 1 ml for each kg of dough. It is available in two versions: for the first and second dough (L20/1) and for the third dough (L20/2). A detailed sheet with instructions for making bread using the starter (or “mother sponge”) method is also available.

An additional version for “Michael’s Bread” (L20/B) is also available, with respective explanation sheet, to be requested specifically.

Food Pre-transformation Purifier (code L 21)

Composition: biodynamic preparations, harmonizer.

The preparation harmonizes and purifies the transformed product of all the negative residues it contains, also improving its qualitative aspects by connecting the transformed product to the Cosmic Principles with which it resonates.

The product should be added to transformed products before the “crushing” process is carried out.

It is available in the “Spray” version and is used in a 1:3333 dilution, inserting 0.3 ml of the preparation (using a graduated syringe, or spraying it) into each kilo of material, at least 3 hours before crushing, which should take place within 7 days.

Pro Food Quality of Transformed Products (code L 22)

Composition: biodynamic preparations, harmonizer

The preparation works on the quality vital forces, thus increasing the qualitative yield of the finished transformed product. It is used when the transformed product has completed its transformation phase (drawing off of must, pressing of olives, curdling of cheese, end-of-boiling of jam, etc.) and begins its ripening phase. It should be added to all products before they are packaged.

It comes in the “Spray” version and is used in a 1:3333 dilution, inserting 0.3 ml of the preparation (using a graduated syringe, or spraying it) into each kilo of mass at the end of the main transformation phase.

It can also be used to “recover” low-quality transformed products which are still undergoing their ripening phase (for example, to improve the acidity of oil, the bouquet and aroma of wine, etc.), leaving it to act for 3 months.

To “recover” a “finished” chemical or biological product, spray it with the necessary doses of L 21 + L 22 (again in the ratio of 1:3333), re-close it and leave it to rest for at least 7 days. If the initial product was homeodynamic, it is enough to use preparation L 22.

Pro conservation of vegetables (code L 23)

Composition: harmonization.

The preparation works by helping to retain the vital forces of the vegetables.

Available in version "Spray" and is used with 2 spurts on the vegetables to be preserved.

GMO Repel (code L 24)

Composition: harmonizer

GMO's (Genetically Modified Organisms) are vegetable and animal species created by man by means of genetic engineering or manipulation. As “artificial” beings, these organisms lack the connection with their own Individual Species Principal, i.e. with the spiritual “centre” that upholds the evolution and development of all natural species.

From a food point of view, these organisms carry within them, and consequently into us, the message of non-connection with the Cosmos.

This preparation works by protecting the consumer from the action of the harmful spiritual forces present in GMO's, thus safeguarding the food from the undesired “presences”. It is very useful in those cases in which one is not sure of the origins

of the raw materials being used, or more directly of the food being eaten. We remind the reader that all soft wheat has, since the '70's, been genetically modified.

It is available in the "Spray" version, and is used by spraying 2 spurts onto the plate of food to be purified, or by spraying a single spurt directly into the pan.

Pro Taste (code L 18)

Composition: biodynamic preparations, harmonizer.

This preparation works on the qualitative aspects of food, particularly enhancing its taste.

It is available in the "Spray" version and is used in a dilution of 1:3333, inserting 0.3 ml of the preparation (using a graduated syringe, or spraying it) into each kilo of food while it is being cooked.

PRODUCTS FOR INDOOR PLANTS

To sustain the health of household plants.

This line originates from the experience gained with our products for agriculture, which have been adapted to the needs of indoor plants.

Liquid fertiliser (code D 01)

Composition: biodynamic preparations, harmonizer, rosemary essential oil.

This preparation works by reinforcing the vegetative forces of the plant, in other words supporting its strength through the contribution of vital forces. The use of this product eliminates the need to use fertilisers, which often reduce the vitality of the soil.

To be used in a 1:1000 dilution (1 ml in 1 litre of water) and sprinkled at least once a month in the water used for watering.

Pro Cut Flower (code D 02)

Composition: biodynamic preparations, harmonizer, savoury essential oil.

This preparation works by reinforcing the vital forces connected with flowers, which usually abandon them shortly after they have been separated from the plant. The preparation helps to maintain these forces bound to the flower, thus prolonging its vigour over time.

It is used in the water of the pot, in a 1:1000 dilution (1 ml of preparation in 1 litre of water) every 2-3 days.

Pro blooming (code D 03)

Composition: vinegar, biodynamic preparations, harmonizer, garlic essential oil.

This preparation stimulates the quality vital forces of the plant, i.e. those forces which rise beyond the pole of strength and of growth, in order to favour the blooming process.

To be used in a 1:1000 dilution (1 ml in 1 litre of water) and sprinkled at least once a month, if possible during the flowering phase.

Generic parasite Repel (code D 04)

Composition: anti-parasite, juniper essential oil.

This preparation re-harmonizes the disturbing conditions which led to the insurgence of the parasitic action in the plant. For a general view of the problem regarding parasites, refer to the note on Page 13.

The preparation should be sprinkled over the plant in a 1:1000 dilution once every two weeks. This intervention should be repeated every 7 days (curative) or every 28 days (preventive). In the event of a strong attack, repeat every 2-3 days.

We suggest that this product be sprinkled as a preventive measure immediately before the days indicated in our “Astronomic Agriculture Calendar”, in that these are the days during which the plant is predisposed to attack by parasites.

Pro Leaf Turgidity (code D 05)

Composition: biodynamic preparations, harmonizer.

This preparation works by bringing specific vital forces to the leaves, which are necessary for their formation and health; in this way, the plant will develop healthy, strong and brightly coloured leaves.

It should be used in a 1:1000 dilution (1 ml in 1 litre of water) and sprinkled at least once a month.

PUBLICATIONS

For deeper study of the research approach of EUREKA

(Complete at July 2009. All written by Enzo Nastati unless otherwise stated. Each section is listed from the most basic texts which it is suggested are read first.)

man: seventeen scientific-spiritual surveys of Benesch and Wilde (pag. 74);

57) Life and death forces and their roles in Nature: an introduction to science of Life, by Enzo Nastati and Fabio Montelatici (pag. 88);

58) The formative forces in the living organisms (crystallization with Copper chloride). A method to understand biological transformations of plant substances, Magda Engquist) (pag. 151);

59) The modern path of initiation through the Book of Form, of Life and of the knowledge (pag. 44);

60) To enter in the Book of Form through the thoughts of Michael and the force of Mary (pag. 27);

61) (In preparation – more on the book of Form)

62) An interpretation of fables and myths: Red Riding Hood, Snow white, Perseus and Parsifal (pag. 78);

63) Raphael's Sistine Madonna: a spiritual-scientific study. (In preparation)

64) Ancient and modern paths of Initiation: from ancient India to the Esoteric Christ (pag. 82);

65) The Sacraments: ancient mysteries and Christian Initiation, by Enzo Nastati and Fabio Montelatici (pag. 102);

66) The road towards fate: a spiritual-scientific examination of the "Lord of Rings", by Fabio Montelatici (pag. 150);

67) The redemption of the Sun: an updated interpretation of the "Lord of Rings", adapted to the current times, by Fabio Montelatici (pag. 30);

68) Spiritual Astronomy: a spiritual-scientific journey from the Milky Way to the Zodiac and from planets to the Earth (pag. 120), by Enzo Nastati, Fabio Montelatici and Achille Minisini†

69) Commentary on Rudolf Steiner's Calendar of the Soul (In Preparation)

70) Commentary on “The course of the year as a path of initiation to experience of the Christ entity- an esoteric examination of the festivities of the year” of S. O. Prokofieff, edited by the Group of Trieste of the Tree of the Life (pag. 114); (In revision – not available)

71) Hygiene of the 12 senses from infancy to the third age, by Livio Casetti (pag. 198); (In revision – not available)

Architecture

72) Influence of colour in life: with indications of how to use colour to heal the house (pag. 39);

73) Influence of form in life: with the indications of using the forms to heal the house (pag. 36);

74) Spiritual-scientific indications for planning and construction: an introduction to spiritual architecture (pag. 71);

75) Course on the quality of dwellings: 12 chapters with indications to carry out an environmental analysis of the ethers, physical and sub-natural elements and forces and how to heal the room using forms, colours and appropriate materials (pag. 315).

Nutrition

76) Cosmic and earthly nutrition: in the four kingdoms of Nature with reference to the theory of ethers and the elements (pag. 24);

77) The quality in food preparation: bread, wine, grape-juice, tofu, jams (pag. 100);

78) Course on quality in nutrition: ten chapters in order to understand the natural kingdoms, and foods. The cosmic and earthly nourishment in man, the nutrition for the seven bodies, the effect of temperature, pots, materials, food preparation (pag. 306);

79) The nutrition of the child in body, soul and spirit, by Enzo Nastati and Fabio Montelatici (pag. 50).

Research

80) Water file: water, its memory, its vitalization in the past and the present with particular reference to the vitalizer “Aqua Viva” and to the tests carried out on it from Institute EUREKA in relation to various types of water pipes (pag. 45).

81) (Pollution dossier : results obtained by EUREKA in purifying environments of heavy metals, atrazine, chlorine, salt, diesel oil, and other harmful synthetic molecules, rat removal, pathogens, brackish water, and of the improvement of the water (pag. 39);

82) Agricultural Dossier: some results from our associates using the homeodynamic method in agriculture, including recovery of damages from frost and hail, stimulation of the nodulation in the leguminous, regeneration of the plants, etc (pag. 65).
